

## Joint Meeting of Coronary Revascularization(JCR) 2015

# ASSOCIATION OF PLASMA ST2 LEVELS WITH ECHOCARDIOGRAPHIC PARAMETERS OF DIASTOLIC DYSFUNCTION IN DIABETIC PATIENTS AT AN OUTPATIENT CLINIC

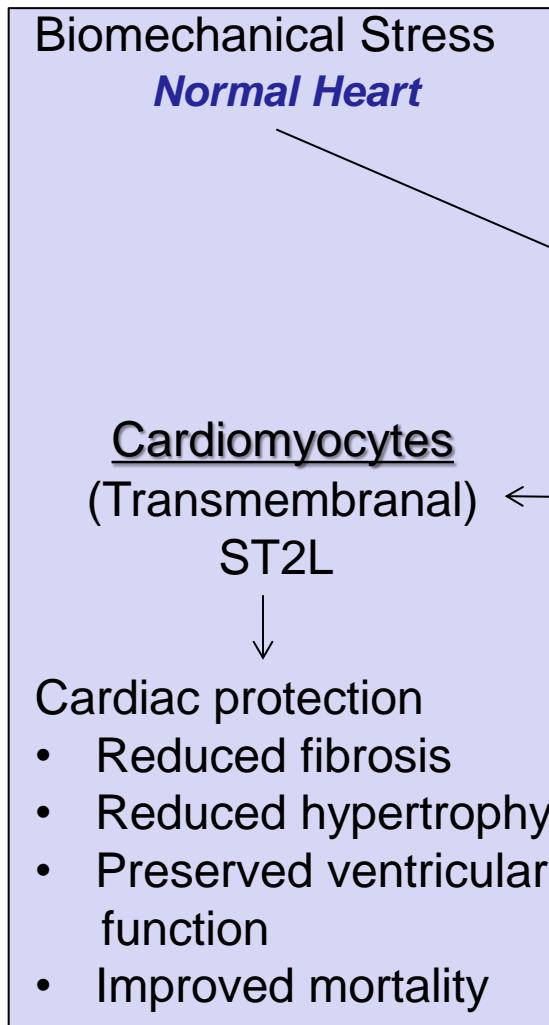

**Diana Hui Ping Foo<sup>1</sup>, Alan Yean Yip Fong<sup>1,2</sup>, Salbiah Binti Sindot<sup>1</sup>,  
Stella Li Li Chan<sup>1</sup>, Ruziah Binti Mat Sa'at<sup>1</sup>, Hasni Adha Binti Ibrahim<sup>1</sup>,  
Sally Suriani Ahip<sup>3</sup>**

<sup>1</sup> Clinical Research Centre, Sarawak General Hospital, Kuching, Sarawak

<sup>2</sup> Department of Cardiology, Sarawak General Hospital Heart Centre, Kota Samarahan, Sarawak

<sup>3</sup> Klinik Kesihatan Kota Sentosa, Kuching, Sarawak

# IL-33/ST2 SIGNALLING PATHWAY

# Mechanisms of contractile dysfunction in diabetic cardiomyopathy

↑ Collagen deposition/  
fibrosis  
↑ Cross-link of collagen &  
laminin fibers

**Remodelling  
of  
Extracellular  
matrix**

The association  
of sST2 and  
myocardial  
fibrosis/ left  
ventricle diastolic  
dysfunction in  
diabetic patients  
has not been  
well-established.

*Insufficient  
energy  
production*

*Reduced  
coronary  
Flow  
reserve*

*Impaired  
excitation-  
Contraction  
coupling*

**Left  
ventricle  
diastolic/  
systolic  
function**

**Diabetic  
cardiomyopathy**

# Where we are...

# Our strength

# Diabetes mellitus is a major health issue in Malaysia

- About 2.6 million (15.2%) adults aged 18 years and above living with diabetes mellitus.

NATIONAL Diabetes Registry  
Report

NATIONAL HEALTH  
AND

- The primary healthcare settings in the Ministry of Health (MOH) bear a much higher diabetic patient load (56%) compared to other healthcare institutions.

Non-Communicable Disease Section  
Disease Control Division  
Ministry of Health Malaysia

# Study rationale (1)

## Framingham Risk Score for Cardiovascular Disease

### Risk Factor

Age

Sex

Systolic Blood pressure

Total cholesterol

HDL

Smoking

Diabetes mellitus

# Study rationale (2)

## Renal assessment

- Proteinuria
- Serum creatinine
- Glomerular filtration rate (GFR)
- Ultrasound

## Cardiovascular risk assessment

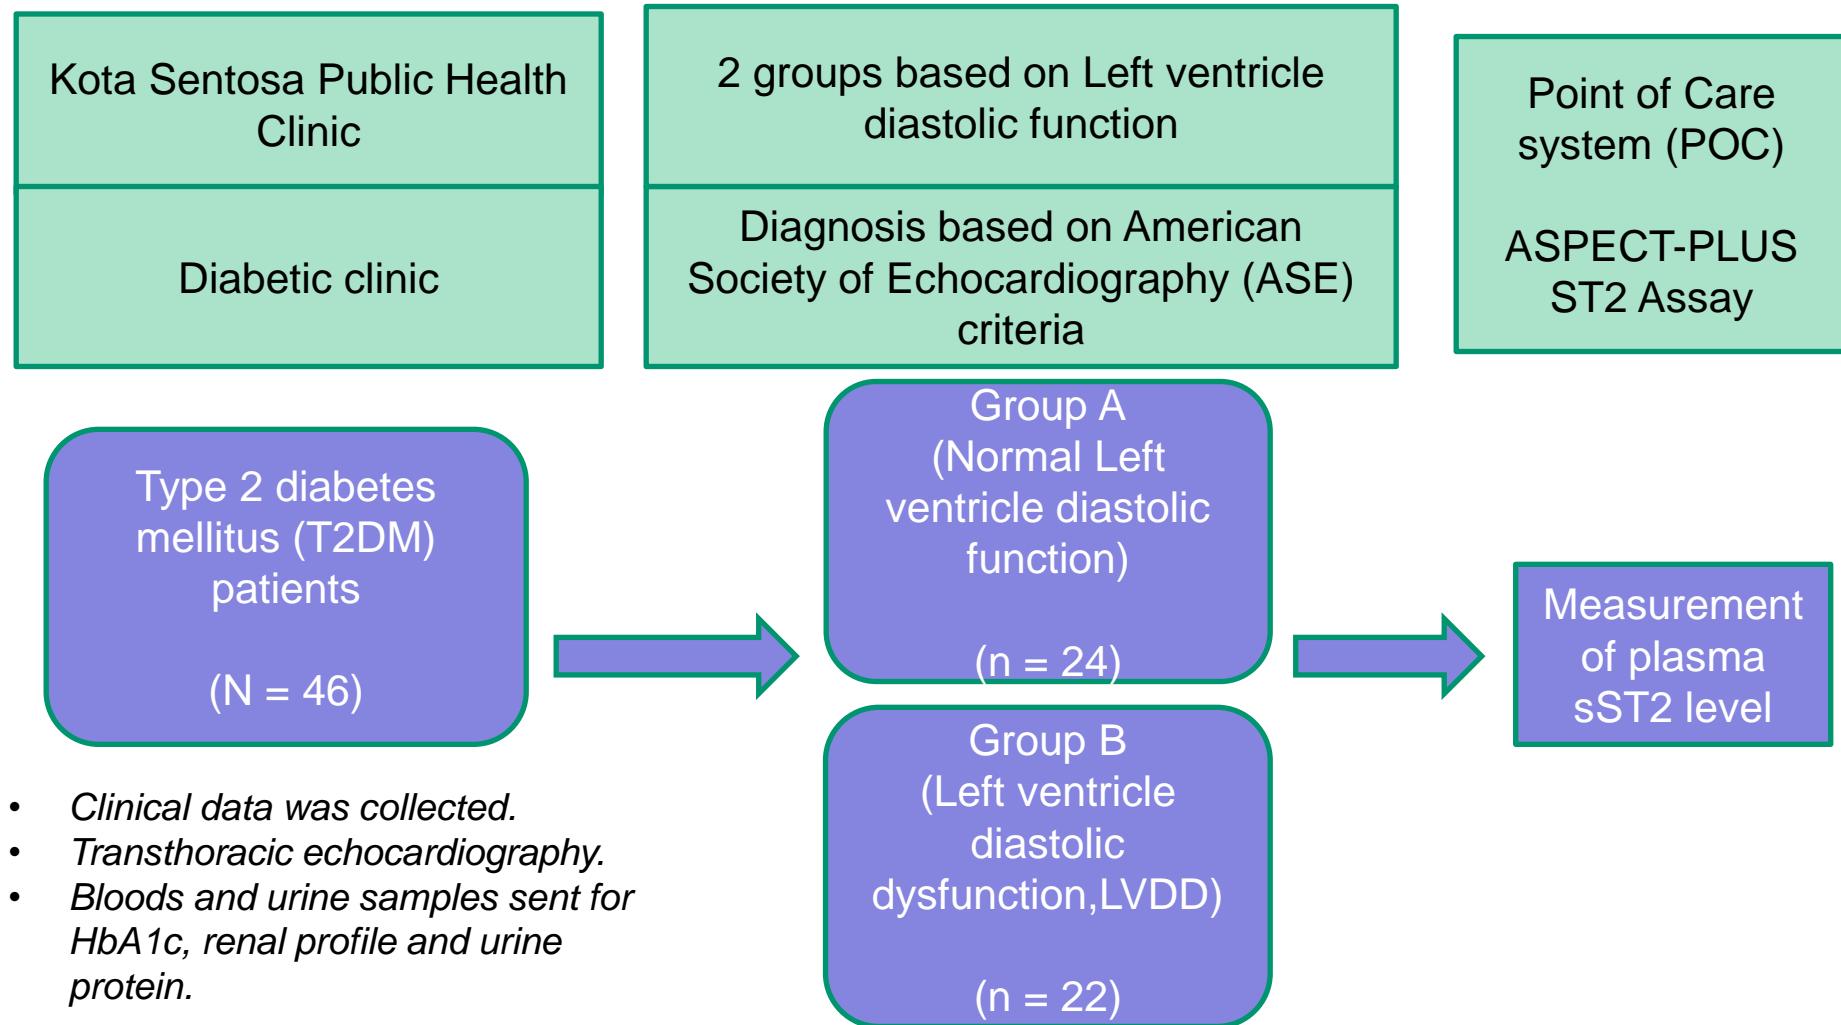

- Assessment of risk factors
- **Limited assess to echocardiography facilities**

**Can ST2 detect left ventricle diastolic dysfunction early in asymptomatic diabetic patients at an ambulatory setting?**

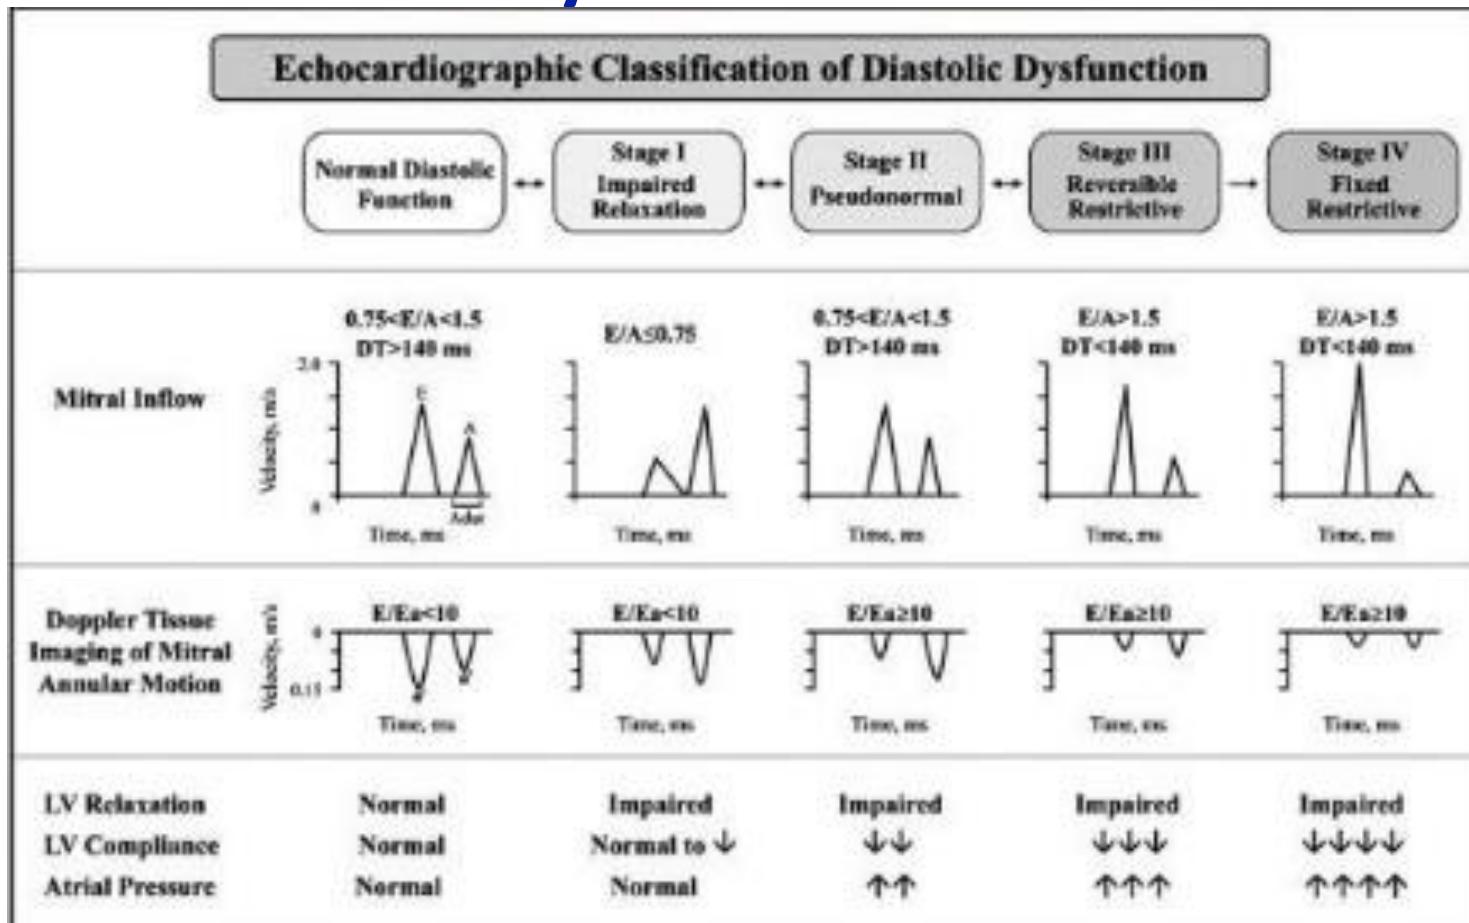

# Objective

- To investigate the association between plasma ST2 levels and left ventricle diastolic dysfunction diagnosed by echocardiography in patients with Type 2 diabetes mellitus

# Materials & Methods

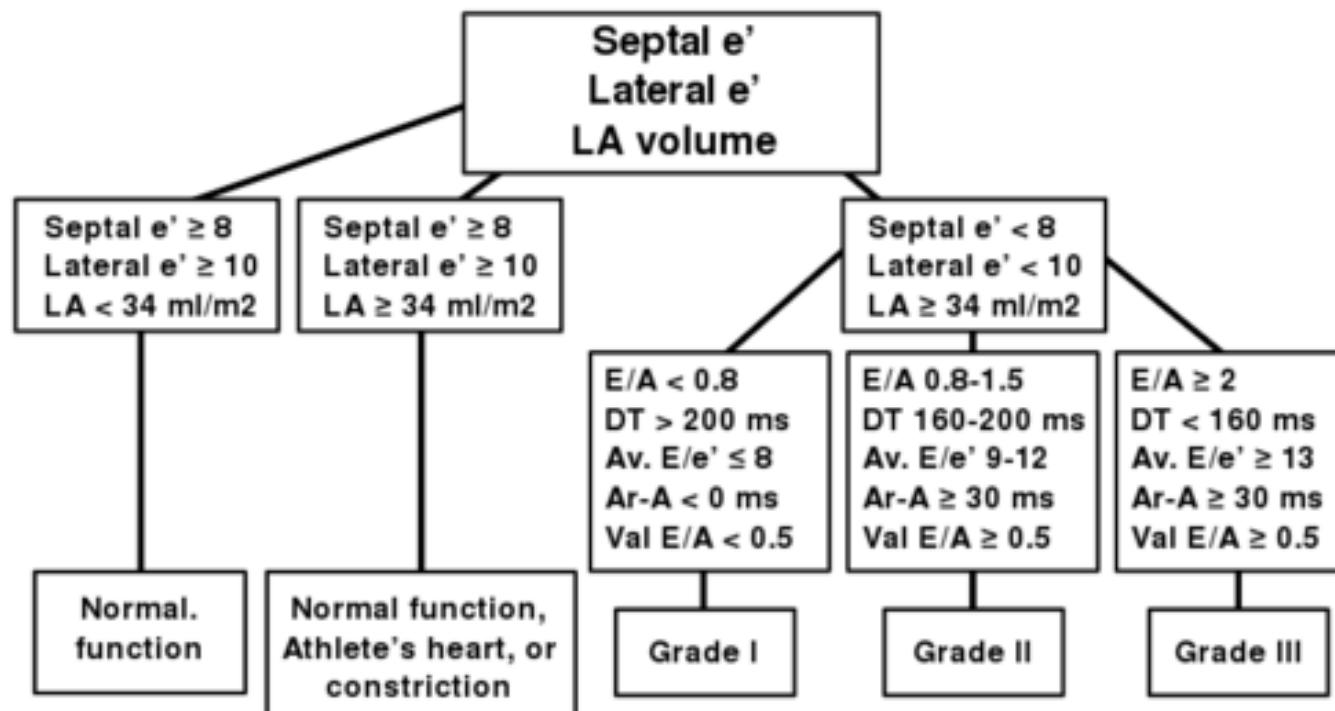

# Echocardiographic criteria of Left ventricle diastolic dysfunction

Nagueh, S.F., et al., *Recommendations for the evaluation of left ventricular diastolic function by echocardiography*. Eur J Echocardiogr, 2009. **10**(2): p. 165-93.

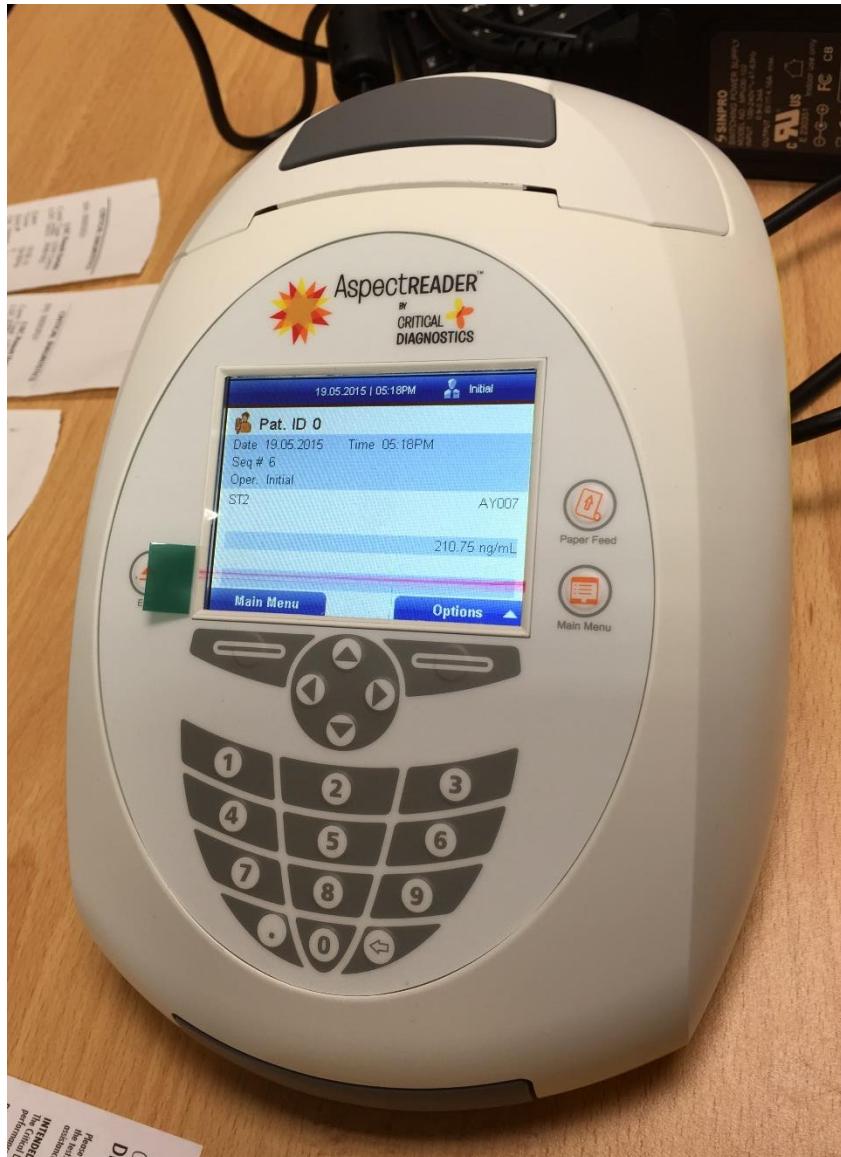

# Echocardiographic criteria of Left ventricle diastolic dysfunction

## Practical Approach to Grade Diastolic Dysfunction

Nagueh, S.F., et al., *Recommendations for the evaluation of left ventricular diastolic function by echocardiography*. Eur J Echocardiogr, 2009. **10**(2): p. 165-93.

# ASPECT-PLUS ST2 Assay

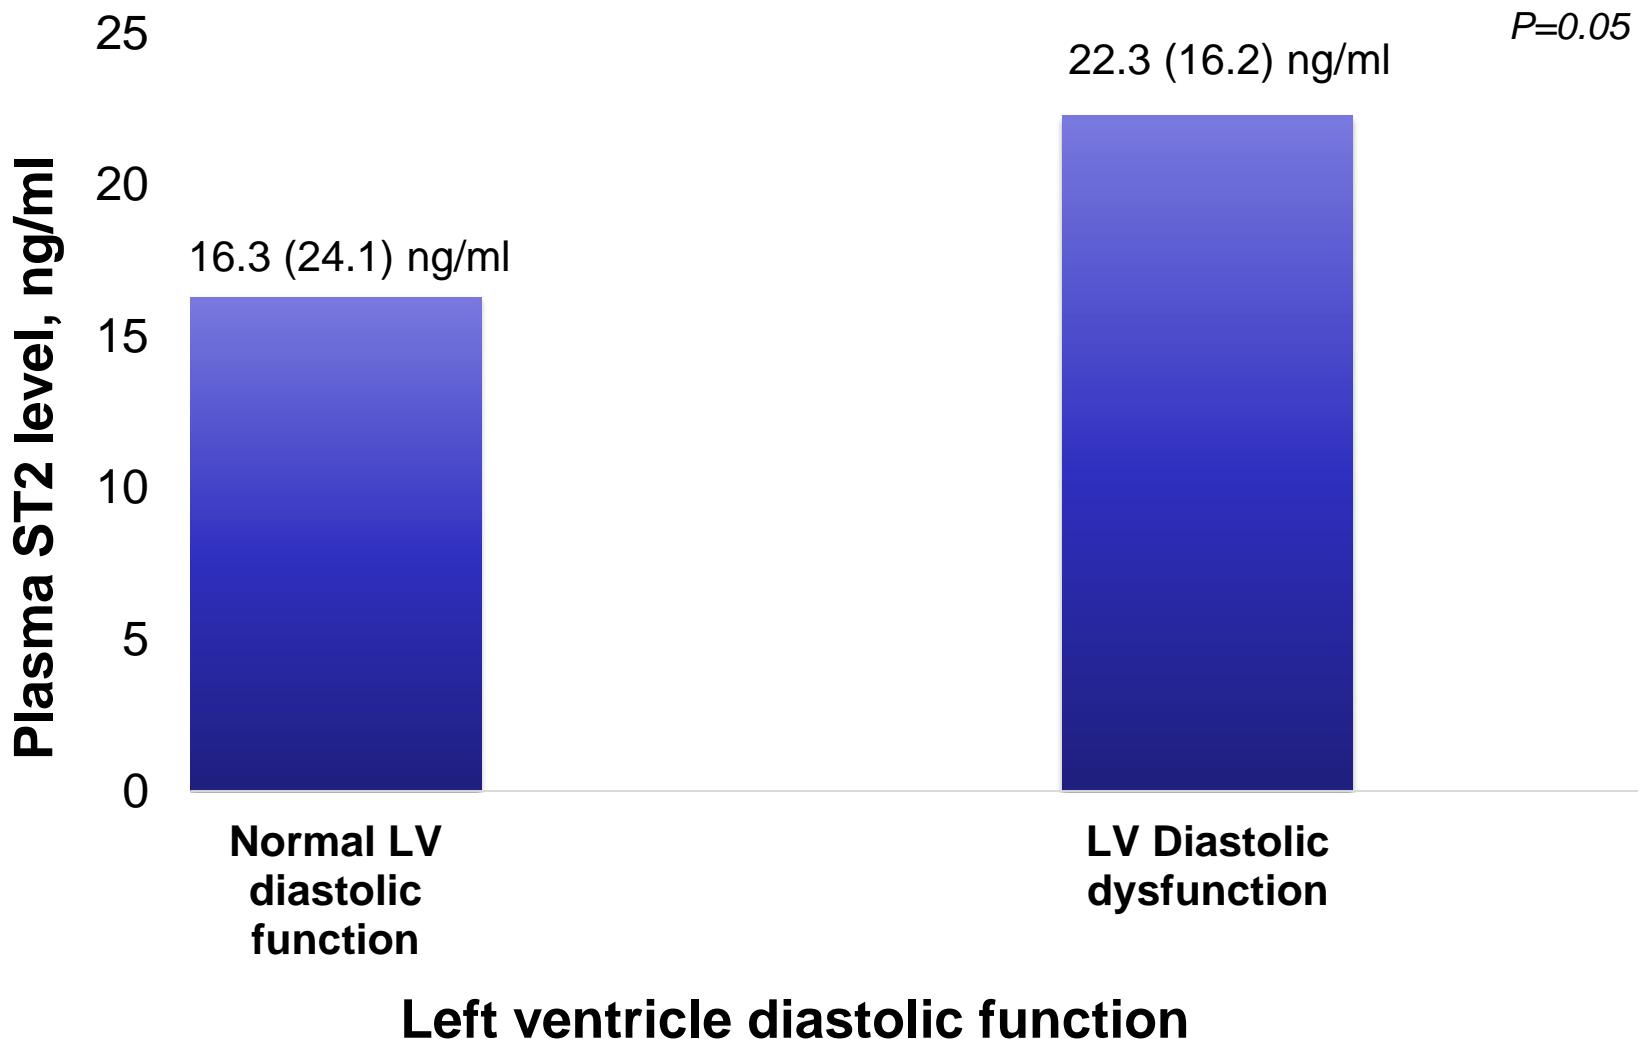

# Clinical Characteristics of Patients

	Overall (N=47)	Group A (Normal) n=24	Group B (LVDD) n=22	P value
<b>Age</b>	$55.4 \pm 11.3$	<b><math>56 \pm 18</math></b>	<b><math>62 \pm 13</math></b>	<b>0.043</b>

# Plasma Level of ST2 According to Left Ventricle Diastolic Function by Echo

# Factors influencing plasma ST2 level

## Left ventricle diastolic dysfunction

Variables	SLR <sup>a</sup>	
	b <sup>c</sup> (95% CI)	P value
Age	0.44 (-1.37,0.49)	0.330
HTN	-6.03 (-39.30, 27.25)	0.710
Proteinuria	8.89 (-11.30, 29.08)	0.369
E/A ratio	22.29(-19.60,64.18)	0.280
E Decel time	0.01 (-0.25, 0.24)	0.951
e'	<b>1.01 (0.45,1.57)</b>	<b>0.001</b>
LAVI	0.90 (-0.19, 1.97)	0.102
E/e'	1.61 (-0.01, 3.24)	0.052
LVH	13.39 (-6.26, 33.03)	0.171

<sup>a</sup> Simple linear regression <sup>b</sup> Multiple linear regression <sup>c</sup> Crude regression coefficient <sup>d</sup> Adjusted regression coefficient

# Limitations

- ❖ Single centre study
- ❖ Small sample size
- ❖ Hypothesis generating
- ❖ Therefore, a larger study is required.

# One size fits all?

- Do ACE-inhibitors and ARBs truly benefit **ALL** Type 2 diabetic patients?
- Echocardiography for early detection of subtle changes in left ventricle diastolic function and monitoring of the progression – **Is this still practical in the real situation?**
- ST2 levels were associated with worsening diastolic dysfunction in patients with Type 2 diabetes mellitus. Larger studies should be warranted.

# Study rationale (2)

## Eye assessment

- Referral to an ophthalmologist

## Renal assessment

- Albuminuria
- Serum creatinine
- Glomerular filtration rate (GFR)
- Ultrasound

## Cardiovascular risk assessment

- Assessment of risk factors
- **Limited assess to echocardiography facilities**

**Can ST2 detect left ventricle diastolic dysfunction early in asymptomatic diabetic patients at an ambulatory setting?**

# Factors influencing plasma ST2 level

## Left ventricle diastolic dysfunction
